INFO ABOUT
BATTERY DISPOSAL

These hazardous items can be recycled. See the **Battery and Chemical Disposal** and **Medicine and Sharps Disposal** pages on our website or **SCAN THE QR CODE** for more information.

Batteries should never be placed into household bins as they can ignite and cause fires in waste collection vehicles or at disposal facilities. This includes embedded batteries in items like toys & vapes. Batteries can be recycled at many locations locally to keep our workers, community and environment safe.
